WHY NESTLÉ IT

3rd-year IT Engineering student (8.13 CGPA) who has independently shipped two production backends with live endpoints — not classroom assignments. Built a hiring platform API serving real traffic with 99%+ uptime over 30 days. Applying to Nesternship to bring backend and data skills to real business problems at the world's largest food & beverage company.

TECHNICAL PROFILE

Backend / API: Node.js, Express.js, RESTful API Design, JWT Authentication, bcrypt

Languages: Python, JavaScript, Java

Databases: MongoDB, MongoDB Atlas, Schema Design, Indexing

Cloud / DevOps: Render (Deployment), Microsoft Azure Fundamentals (AZ-900 coursework)

Tooling: Git, GitHub, Postman, Canva

Web: HTML5, CSS

PROJECTS & IMPACT

SkillMatch — Skill-Based Hiring Platform | *Node.js, Express.js, MongoDB, JWT, Render* Jan 2025 – Present

- Designed and deployed a **20+ endpoint REST API** on Render with MongoDB Atlas — achieving **<500ms average response time** and **99%+ uptime** over 30 days in production.
- Built a **0–100% skill-match scoring algorithm** removing CGPA bias from hiring; manages candidate–job matching across **5 interconnected MongoDB collections** with referenced relationships.
- Secured **15+ protected routes** with JWT role-based middleware and bcrypt hashing — zero unauthorized access in all tested scenarios.
- Built automated application pipeline blocking duplicate submissions and tracking 3 status states (applied / shortlisted / rejected) with separate dashboards for companies and students.
- Validated schema integrity across **500+ test records** with zero orphan documents using unique indexes.
- Live: skillmatch-backend.onrender.com | [GitHub](#)

WanderLust — Property Listing & Booking Web App | *Node.js, Express.js, MongoDB* Jan 2025 – Present

- Shipped a booking platform supporting host and guest roles; REST APIs handle listings, bookings, and user management within a single scalable schema.
- Implemented role-based access control segregating host vs. guest permissions — zero privilege-escalation issues found across all tested user flows.
- Designed forward-compatible MongoDB schema for listings, users, and bookings structured to support significant data growth without structural migration.

Python Resume Content Analysis & Builder | *Python, text processing* Mar 2025 – Present

- Built a modular text-processing pipeline parsing unstructured resume content into structured output — validated against **50+ edge-case inputs** with consistent accuracy.
- Automated section classification and output templating, significantly reducing manual formatting effort.

EDUCATION

GHRCEM, Pune

Bachelor of Engineering — Information Technology | CGPA: 8.13 / 10

Pune, Maharashtra

Expected June 2026

Nutan Vidyalaya, Malkapur

Higher Secondary Certificate (XII)

Malkapur, Maharashtra

2023

CERTIFICATIONS & RECOGNITION

Microsoft Azure Fundamentals (AZ-900) — Completed coursework; certification scheduled.

Self-Built End-to-End Projects — Both backends conceived, built, and deployed independently without a team, demonstrating full ownership from schema design to production deployment.

College Event Poster Designer — Visual communications for student events using Canva.

Available immediately for Nesternship (IT) · Open to remote or on-site · Weekends fully available
