SUMMARY

Backend-focused Full Stack Developer with production experience building REST APIs using Node.js, Express.js, and MongoDB. Proficient in JWT authentication, role-based access control, and schema design. Comfortable with React for full stack development. Solved 100+ DSA problems in Java. Seeking a Backend or Full Stack Developer Internship.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Java (DSA), Python

Backend: Node.js, Express.js, REST API Design, JWT Authentication, bcrypt, Middleware, RBAC

Frontend: React, HTML, CSS

Databases: MongoDB, MongoDB Atlas, Schema Design, Indexing

Tools: Git, GitHub, Postman, Vercel, Render, VS Code

PROJECTS

SkillMatch | *Node.js, Express.js, MongoDB Atlas, JWT, React* | [Live Demo](#) | [GitHub](#) Jan 2025 – Present

- Built a full-stack job platform with skill-overlap matching using custom scoring logic; REST APIs handle registration, job posting, and application tracking with JWT-based RBAC across candidate, employer, and admin roles.
- Implemented skill-match scoring using referenced MongoDB collections with unique indexes; enforced compound index constraints to prevent duplicate applications at the database level.
- Tracked application lifecycle (applied → shortlisted → rejected) server-side with status validation middleware; deployed frontend on Vercel and backend on Render.
- Structured Express routes with role-based middleware guards so each user type can only access permitted endpoints, reducing unauthorized access risk.

WanderLust | *Node.js, Express.js, MongoDB* Jan 2025 – Present

- Built REST APIs for a property listing and booking system with isolated role-based access for host and guest users.
- Designed MongoDB schemas with referential integrity across users, listings, and bookings; enforced input validation and consistent error handling at every route.
- Implemented ownership checks on listing update and delete routes to ensure only the creating host can modify their own records.

Python Resume Analyzer | *Python, NLP, Text Processing* Mar 2025 – Present

- Built a modular NLP pipeline using regex and rule-based classification to extract structured sections (skills, education, experience) from unformatted resume text.
- Added job description comparison logic that scores skill overlap and returns a match percentage, helping users identify gaps before applying.
- Designed each parser as an independent module so new section extractors can be added without modifying existing pipeline logic.

EDUCATION

GH Raison College of Engineering & Management
B.Tech in Information Technology | CGPA: 8.13 / 10

Pune, Maharashtra
Expected June 2026

ADDITIONAL

DSA: Solved 100+ problems in Java – arrays, hashing, two pointers, sliding window, strings.

Certification: Microsoft Azure Fundamentals (AZ-900) – coursework completed, exam scheduled.

Open Source: All projects on GitHub with documented commit history and READMEs.
